Anti-skid Ceramic Roller Bar For Roller Kiln

1,introduction of Anti-skid Ceramic Roller Bar For Roller Kiln

The product is formed by mud drilling and pipe extrusion,The appearance quality and strength of the product are superior to that of grouting.The surface of the product is processed into stripe shape, which effectively improves the anti-skid performance, reducing collision and not changing driving direction during the use of the product, and improves the use effect.Each end of the product has one or two openings, which facilitates and improves the efficiency of transmission.The addition of 7-15% zirconium oxide in the product improves the high temperature resistance and wear resistance of the product, and effectively improves the use times.

2,Characteristics of Anti-skid Ceramic Roller Bar For Roller Kiln

- 1) The products are zirconium ceramic rollers, anti-skid, high temperature resistant, and the service temperature is 1450℃.
- 2) Good thermal shock stability, no cracking.
- 3) High flexural strength, round, straight and not easy to bend.
- 4) Low water absorption, high fire resistance, high temperature resistance and good wear resistance.

3,Application of Anti-skid Ceramic Roller Bar For Roller Kiln

Used in high temperature ceramic tile roller kiln, high temperature ceramic roller kiln, high load product roller kiln, etc.

4,Index:

ITEM	JZHB-15
